The AICES Ph.D. program at the RWTH Aachen University is open to a limited number of extremely well-qualified students with a substantial background in their proposed field. The graduate school sets out to advance the computational engineering science in three critical areas of synthesis: model identification and discovery supported by model-based experimentation, understanding scale interaction and scale integration, and optimal design and operation of engineered systems. The application areas include materials science, chemical engineering, transportation systems, electrical engineering, biomedical engineering, and geoscience.
